

Meniscectomy

Individual patient circumstances may affect the guideline (tear configuration, fixation used, associated procedures, etc.)

Phase	Goals	Precautions/Restrictions	Treatment
Phase I	 Protect surgical site Reduce muscle atrophy Reduce swelling Decrease pain and inflammation SLR without extensor lag ROM: 0-90° Criteria to progress to phase II: Full ROM > 80% strength compared to uninvolved side No effusion No pain with strengthening 	 ROM: AAROM to AROM as tolerated WBAT (crutches as needed) Brace: none No jogging or sport activity Avoid painful activities/exercises 	 PRICE Cryotherapy: 5-7 times per day Compression with TubiGrip/TEDS ROM: as tolerated Gait training to independent Core stabilization exercises Neuromuscular re-education Global LE strengthening Begin functional strengthening exercises (bridge, squat, step up, etc.) Double limb -> single limb balance/proprioception Aerobic training: walking program, stationary bike, elliptical, stairmaster
Phase II	 No effusion Maintain full ROM Increase functional LE strength Replicate sport or work specific energy demands Return to sport/activity Pass return to sport criteria for sport clearance 	 Avoid painful activities/exercises Avoid post-activity swelling Post-activity soreness should resolve within 24 hours Respect lifting loads focusing on form, control, and tissue tolerance No jogging or plyometrics on painful or swollen knee Return to sport with surgeon approval 	 Increase loading capacity for lower extremity strengthening exercises Double limb -> Single limb Progress as tolerated: ROM, Strength, Endurance, Proprioception/Balance, agility, Sport specific skills Gradually increase lifting loads focusing on form, control, and tissue tolerance Continue running program/movement progression ARC Program
